

Fact Sheet

SOURCED DATA FOR JOURNALISTS · MARCH 2026

This document supports editorial verification of the key claims in the My Villa Press Kit. Each statement is paired with its primary source. Claims are graded by source authority: Tier 1 (official / government), Tier 2 (recognized industry research).

WILDFIRE IMPACT IN LOS ANGELES

TIER 1

The January 2025 Palisades Fire destroyed over 6,800 structures across Pacific Palisades and Malibu. Combined with the Eaton Fire, the January 2025 events were the most destructive in Los Angeles history.

CAL FIRE, Palisades Fire Incident Report, January 2025. fire.ca.gov/incidents/2025/1/7/palisades-fire

CONSTRUCTION STANDARDS & METHODS

TIER 2

In 2024, 94% of completed single-family homes in the United States used wood framing. Concrete-framed homes represented approximately 5% of completions.

NAHB analysis of U.S. Census Bureau, Survey of Construction, 2024. eyeonhousing.org

TIER 1

California's code framework recognizes wildfire exposure as a core building-design issue. Noncombustible and ignition-resistant assemblies are central to compliant wildfire-hardened construction in designated zones.

California Building Standards Code, Title 24, Part 2 (CBC Chapter 7A); bsc.ca.gov

TIER 1

FEMA identifies reinforced concrete, reinforced masonry, and non-combustible wall assemblies among recommended construction strategies for wildfire-prone areas.

FEMA P-737, Builder's Guide to Construction in Wildfire Zones. fema.gov

INSURANCE & MITIGATION

TIER 1

Several of California's largest homeowner insurers, including State Farm and Allstate, have paused or restricted new policies in fire-prone areas since 2022.

State Farm Newsroom, May 2023; California Dept. of Insurance public records. insurance.ca.gov

TIER 1

California's regulatory framework explicitly links verified wildfire-mitigation measures to insurance discounts, with the direction of regulation toward more explicit recognition of mitigation in underwriting and pricing.

California Dept. of Insurance, Safer from Wildfires program. insurance.ca.gov/saferfromwildfires

LOS ANGELES LUXURY MARKET

TIER 2

Greater Los Angeles recorded 499 single-family home sales above \$10M in 2024. Through July 2025, 348 properties had already closed at \$10M+, tracking approximately 20% higher than the same period in 2024.

Douglas Elliman / Knight Frank, The Wealth Report 2025; Miller Samuel Real Estate Appraisers market data. [elliman.com](#)

RESILIENT CONSTRUCTION: COST & DURABILITY

TIER 2

Wildfire-resistant detailing does not necessarily imply an extreme cost penalty relative to conventional construction. IBHS research found that constructing a wildfire-resistant home can add as little as 3% to the cost of critical building components.

Headwaters Economics & IBHS, Construction Costs for Wildfire-Resistant Homes, October 2025. [headwaterseconomics.org](#)

TIER 1

Reinforced concrete construction typically costs in the order of 10–15% more than wood-frame for residential structures, depending on design complexity and local market conditions.

U.S. Dept. of Housing and Urban Development, Costs and Benefits of Insulating Concrete Forms for Residential Construction. [huduser.gov/publications/pdf/icfbenefit.pdf](#)

EUROPEAN CONSTRUCTION CONTEXT

TIER 1

In Europe, reinforced concrete and masonry have been the predominant residential construction method since the mid-20th century, particularly in seismic zones. EU-wide structural design is governed by the Eurocodes framework, including Eurocode 2 (concrete) and Eurocode 6 (masonry).

European Commission Joint Research Centre, Eurocodes programme. [eurocodes.jrc.ec.europa.eu](#)

POST-FIRE REBUILDING

TIER 2

Some homeowners rebuilding after the 2025 Los Angeles fires are choosing concrete over traditional wood framing, citing fire resistance and potential insurance considerations. The permitting process has been progressively accelerated by LA city and county authorities.
